
Board and management exercises warrants of series TO 2

PRESS RELEASE
11 December 2020

Initiator Pharma A/S (“Initiator Pharma” or “the Company”) exercise period for warrants of series TO 2 (“TO 2”) is currently ongoing and it ends on Tuesday, December 15, 2020. The Company can today announce that members of the Board and management has exercised TO 2 for a total amount corresponding to approximately SEK 0.5 million. Among those who have exercised their TO 2 are, among others, the Company's CEO Claus Olesen and chairman Magnus Persson.

TO 2 was issued in connection with the Company's rights issue of units and directed issue of units in June 2020. The capital the Company can be provided through TO 2 amounts to a maximum of approximately SEK 16.4 million and is intended to finance the Company's clinical phase II study with the drug candidate IP2018.

The information was provided by the contact person above, to be published on December 11, 2020, at 12:45 (CET).

About Initiator Pharma

Initiator Pharma is a clinical-stage biotechnology company based in Aarhus, Denmark. The company's main clinical Phase assets are IPED2015, intended for patients with erectile dysfunction, and IP2018, for the treatment of psychogenic erectile dysfunction. The treatments both represent First in Class treatments for psychogenic and organic ED, respectively, and are expected to improve the quality of life for a growing number of patients who are not responding to or cannot be treated with existing drugs on the market. Read more on www.initiatorpharma.com.

About Erectile dysfunction (ED)

Erectile dysfunction is sexual dysfunction characterized by the inability to develop or maintain an erection of the penis during sexual activity. ED affects more than 150 million men worldwide and that number is expected to increase to more than 320 million by 2025, fuelled by aging demographics and increasing prevalence of lifestyle diseases such as diabetes, and performance anxiety. The number of ED patients is most likely grossly underestimated, particularly for Psychogenic patient segment. ED patients have decreased quality of life due to various psychosocial factors such as low self-esteem, depression, sadness, anger, frustration, anxiety, medication, and relationship problems (1,2,3). Erectile dysfunction can be divided into two main categories – Organic and Psychogenic ED – that requires different

treatments. Initiator Pharma is developing IPED2015 and IP2018, respectively, for these similar but separate patient segments.
